

# Contents

<b>1</b>	<b>Classical field theory</b>	<b>1</b>
1.1	The Lagrangian and Hamilton's principle . . . . .	1
1.2	The Lagrangian for continuous systems . . . . .	7
1.3	Classical relativistic field theories . . . . .	11
1.4	Symmetries . . . . .	19
1.5	Currents and conservation laws . . . . .	24
	Problems . . . . .	29
	References . . . . .	33
<b>2</b>	<b>Feynman diagrams for spinless fields</b>	<b>34</b>
2.1	External sources . . . . .	34
2.2	Particles and propagators . . . . .	37
2.3	Pion scattering by an electromagnetic potential . . . . .	44
2.4	Feynman rules for spinless fields . . . . .	50
2.5	An example: pion-pion scattering . . . . .	60
2.6	Quantum corrections . . . . .	65
	Problems . . . . .	70
	References . . . . .	72
<b>3</b>	<b>Cross sections and decay rates</b>	<b>74</b>
3.1	Relativistic wave functions . . . . .	75
3.2	The probability amplitude . . . . .	78
3.3	Cross sections . . . . .	81
3.4	Kinematics for (quasi-)elastic scattering . . . . .	86
3.5	On polarization vectors . . . . .	90
3.6	Unstable particles and decay rates . . . . .	93
3.7	Three-particle phase space . . . . .	102
3.8	Hadronic decays of neutral K-mesons . . . . .	106
	Problems . . . . .	111
	References . . . . .	116

<b>4</b>	<b>Particles with spin one</b>	<b>118</b>
4.1	Massive spin-1 particles . . . . .	118
4.2	Massless spin-1 particles . . . . .	123
4.3	Electromagnetic scattering of pions . . . . .	127
4.4	Pion-Compton scattering . . . . .	131
4.5	Decay rate for $\pi^0 \rightarrow \gamma\gamma$ . . . . .	134
4.6	Bremsstrahlung in the decay $K_S^0 \rightarrow \pi^+\pi^-\gamma$ . . . . .	140
	Problems . . . . .	146
	References . . . . .	151
<b>5</b>	<b>Particles with spin one-half</b>	<b>153</b>
5.1	Feynman rules for spin- $\frac{1}{2}$ fields . . . . .	153
5.2	Lagrangians for fermions . . . . .	161
5.3	Properties of spinors . . . . .	167
5.4	Invariant amplitudes for spinors . . . . .	172
5.5	An application: boson decays into two spin- $\frac{1}{2}$ fermions . . . . .	175
5.6	Weak and electromagnetic two-particle decays and universality . . . . .	179
	Problems . . . . .	186
	References . . . . .	192
<b>6</b>	<b>Cross sections for processes involving fermions</b>	<b>194</b>
6.1	Introduction . . . . .	194
6.2	The four-fermion amplitude . . . . .	197
6.3	Lepton scattering on a pointlike fermion . . . . .	205
6.4	Lepton-nucleon elastic scattering . . . . .	211
6.5	Lepton-nucleon inelastic scattering . . . . .	215
6.6	Quark constituents . . . . .	224
6.7	Annihilation processes involving pointlike fermions . . . . .	233
	Problems . . . . .	242
	References . . . . .	245
<b>7</b>	<b>Chirality, helicity and discrete symmetries</b>	<b>248</b>
7.1	Discrete symmetries . . . . .	248
7.2	Spinor-helicity methods . . . . .	255
7.3	Monte Carlo techniques . . . . .	255
	Problems . . . . .	255
	References . . . . .	255
<b>8</b>	<b>Quantum corrections</b>	<b>256</b>
8.1	The $\pi^0 \rightarrow \gamma\gamma$ triangle diagram . . . . .	257
8.2	Infinities . . . . .	261
8.3	Renormalization of quantum electrodynamics . . . . .	267
	Problems . . . . .	273

References . . . . .	275
<b>9 Dimensional regularization and radiative corrections</b>	<b>276</b>
9.1 Field theories in $n$ space-time dimensions . . . . .	276
9.2 Evaluation of Feynman integrals in $n$ space-time dimensions . .	278
9.3 Feynman parameters . . . . .	285
9.4 Divergent one-loop diagrams in quantum electrodynamics . . .	289
9.5 The $ee\gamma$ amplitude . . . . .	303
9.6 Radiative corrections . . . . .	309
Problems . . . . .	322
References . . . . .	328
<b>10 Asymptotic behaviour</b>	<b>331</b>
10.1 The renormalization group . . . . .	331
10.2 Minimal subtraction . . . . .	336
10.3 The running coupling constant . . . . .	343
10.4 Asymptotic behaviour . . . . .	347
10.5 Vacuum polarization . . . . .	351
Problems . . . . .	363
References . . . . .	367
<b>11 Local Gauge Invariance</b>	<b>369</b>
11.1 Local versus rigid invariance . . . . .	369
11.2 Gauge field theory of $U(1)$ . . . . .	371
11.3 Current conservation . . . . .	378
11.4 Conserved charges . . . . .	382
11.5 A low-energy theorem for pion-Compton scattering . . . . .	385
11.6 More photons . . . . .	389
Problems . . . . .	394
References . . . . .	400
<b>12 Nonabelian gauge theories</b>	<b>401</b>
12.1 Nonabelian gauge fields . . . . .	402
12.2 Gauge theory of $SU(2)$ . . . . .	409
12.3 The gauge field Lagrangian . . . . .	413
12.4 Chiral gauge groups and discrete symmetries . . . . .	418
Problems . . . . .	421
References . . . . .	425
<b>13 Feynman rules for gauge fields</b>	<b>426</b>
13.1 The gauge field propagator . . . . .	426
13.2 Gauge fixing . . . . .	430
13.3 Ghosts . . . . .	436

13.4 Ghost Lagrangian . . . . .	444
13.5 Feynman rules in the Lorentz gauge . . . . .	450
13.6 Ward identities and one-loop unitarity . . . . .	451
Problems . . . . .	453
References . . . . .	456
<b>14 Renormalization of gauge fields</b>	<b>457</b>
14.1 Preliminaries . . . . .	457
14.2 Renormalization and one-loop counterterms . . . . .	460
14.3 One-loop divergent graphs; fermions . . . . .	463
14.4 Vacuum polarization; ultraviolet versus infrared divergences . .	473
14.5 One-loop divergent graphs; gauge and ghost fields . . . . .	480
Problems . . . . .	490
References . . . . .	492
<b>15 Asymptotic freedom and different mass scales</b>	<b>493</b>
15.1 Asymptotic freedom . . . . .	493
15.2 Different mass scales . . . . .	495
15.3 Effective field theory . . . . .	502
Problems . . . . .	502
References . . . . .	502
<b>16 Quantum chromodynamics</b>	<b>503</b>
16.1 Quarks and gluons; flavour and colour . . . . .	503
16.2 Colour degeneracy and confinement . . . . .	507
16.3 Quantum chromodynamics . . . . .	511
16.4 Perturbative QCD . . . . .	514
16.5 Non-perturbative quantum chromodynamics on the lattice . . .	523
Problems . . . . .	526
References . . . . .	528
<b>17 Perturbative quantum chromodynamics</b>	<b>529</b>
17.1 Factorization . . . . .	529
17.2 Partonic cross section for Drell-Yan scattering . . . . .	534
17.3 Partonic cross section for deep-inelastic scattering . . . . .	546
17.4 Jets . . . . .	549
Problems . . . . .	554
References . . . . .	555
<b>18 Spontaneously broken symmetry</b>	<b>556</b>
18.1 Spontaneously broken realizations of a symmetry . . . . .	558
18.2 Spontaneously broken chiral symmetry . . . . .	564
18.3 Counting Goldstone bosons . . . . .	570

Problems . . . . .	574
References . . . . .	576
<b>19 Hidden gauge symmetry</b>	<b>577</b>
19.1 The Brout-Englert-Higgs mechanism . . . . .	578
19.2 Nonabelian examples . . . . .	582
19.3 Choosing a gauge . . . . .	586
19.4 Gauge independence; an example . . . . .	592
19.5 Phase structure of gauge theories . . . . .	595
Problems . . . . .	598
References . . . . .	599
<b>20 The standard model for electroweak interactions</b>	<b>600</b>
20.1 The prototype model . . . . .	601
20.2 Generations and anomaly cancellation . . . . .	608
20.3 Generation mixing and CP violation . . . . .	613
20.4 The standard model in renormalizable gauge . . . . .	618
Problems . . . . .	622
References . . . . .	622
<b>21 Some electroweak phenomenology</b>	<b>623</b>
21.1 Higgs . . . . .	624
21.2 Closed fermion loops; heavy doublets and decoupling . . . . .	624
21.3 Radiative processes, finite widths . . . . .	624
21.4 Higgs decay into two photons . . . . .	624
21.5 The decay $Z \rightarrow q\bar{q}$ . . . . .	631
Problems . . . . .	631
References . . . . .	631
<b>22 Anomalies</b>	<b>632</b>
22.1 Introduction . . . . .	633
22.2 Triangle anomaly . . . . .	639
22.3 Once more pion decay . . . . .	639
22.4 Gauge fields . . . . .	639
Problems . . . . .	639
References . . . . .	641
<b>23 Beyond the Standard Model</b>	<b>642</b>
Problems . . . . .	642
References . . . . .	642
