This work is part of a research program funded in part by the Stichting voor Fundamenteel Onderzoek der Materie (FOM), which is financially supported by the Nederlandse Organisatie voor Wetenschappelijk Onderzoek (NWO).

ISBN 978-90-367-9319-3 (printed version)

ISBN 978-90-367-9318-6 (electronic version)

Printed by: Ipskamp Drukkers, Enschede, November 2016

Cover: (front) Lorentz invariance violation would be observed when there is a dependence on the orientation of an experiment in absolute space. It would also be observed as day-night differences due to Earth's rotation.

(back) The spin of the β^+ emitter ^{20}Na is oriented by using laser light with a wavelength of 590 nm.

Testing Lorentz invariance in β decay

Proefschrift

ter verkrijging van de graad van doctor aan de
Rijksuniversiteit Groningen
op gezag van de
rector magnificus prof. dr. E. Sterken
en volgens besluit van het College van Promoties.

De openbare verdediging zal plaatsvinden op
maandag 5 december 2016 om 14.30 uur

door

Auke Sijtema

geboren op 29 juli 1986
te Apeldoorn

Promotor

Prof. dr. H. W. E. M. Wilschut

Copromotor

Dr. ir. C. J. G. Onderwater

Beoordelingscommissie

Prof. dr. A. Garcia

Prof. dr. W. Heil

Prof. dr. A. Pellegrino

Contents

1	Introduction	1
1.1	Outline of this thesis	5
2	Concepts	7
2.1	General considerations	7
2.2	Theoretical framework	8
2.3	Current status of χ	11
2.4	Detection strategy and isotope selection	11
2.5	Polarization	14
3	A gas cell for stopping, storing and polarizing radioactive particles	15
3.1	Introduction	15
3.2	Experimental setup	16
3.3	Characteristic time parameters	19
3.3.1	Neutralization	20
3.3.1.1	Neutralization in stopping	20
3.3.1.2	Neutralization in a uniform plasma	20
3.3.1.3	Neutralization by Bragg peak electrons	21
3.3.1.4	Re-ionization	22
3.3.1.5	Resonant charge transfer	22
3.3.2	Optical pumping	22
3.3.3	Diffusion	23

3.3.4	Contaminants	23
3.4	Experimental results	23
3.5	Conclusions	26
4	Test of Lorentz invariance in β decay of polarized ^{20}Na	29
4.1	Introduction	29
4.2	Principle of the measurement	30
4.3	Experimental setup and procedures	31
4.3.1	Nuclear detection	31
4.3.2	Polarization	33
4.3.3	Additional measurements	35
4.4	Analysis	35
4.4.1	Determining Δ_{LIV}	36
4.4.2	Systematic corrections to Δ_{LIV}	40
4.4.3	Experimental sensitivity	42
4.4.3.1	Depolarization dependence	43
4.4.3.2	Impact of the correction for systematic errors	43
4.5	Results and interpretation	44
4.6	Conclusions and discussion	46
4.A	Formula for the γ -detector rate for repeated data cycles . . .	48
4.B	Procedure used for systematic correction	48
4.C	The sensitivity factor	50
5	Summary, Outlook and Conclusions	53
5.1	Summary	53
5.2	Outlook	58
5.2.1	Missing coefficients	58
5.2.2	Improving current experiments	59
5.2.2.1	Measurements that use polarized sources .	59
5.2.2.2	Measuring the anisotropy of the β -particle emission	60
5.2.3	New experimental methods	61
5.2.3.1	Anisotropy of γ radiation	62
5.2.3.2	Electron-capture sources	62
5.2.3.3	Accelerator-based experiments	63
5.3	Conclusions	69
