

All experiments described in this handbook can be performed with the “COBRA-Interface” which has following specific features:

The versatile high performance computer interface basic unit can be extended by means of a series of supplementary modules.

- Intelligent, microprocessor controlled interface for the performance of measurements and experiments in physics, chemistry, biology and technology
- Can be connected directly to any modern computer over the standard serial interface (RS 232) without supplementary cards and without opening the computer housing
- Replaces devices such as 4-channel plotters, xyt-plotters, transient plotters, digital counters, temperature, conductivity, pH, pressure measuring devices, etc.
- No load on the computer power supply due to the interface, thus excluding computer failures due to partial power supply overloads
- High performance, adjustable direct voltage output to provide power for experiments and for programmable power outputs
- Continuous extension of the series of modules and of the software library keeps on providing new applications for the COBRA user

This handbook specially covers experiments which may be performed in conjunction with the COBRA lux and oxygen modules.

This HANDBOOK can be purchased separately. It contains the experiments listed below. Please ask for a complete equipment list. Ref No 26106

Handbook • COBRA – Lux and Oxygen • No. 01257.02 • 7 described Experiments

CBO 1 (12221)

Light flicker

CBO 2 (12222)

Luminous intensity – variation with time of the day

CBO 3 (12223)

Dependence of luminous intensity on distance

CBO 4 (12224)

Dependence of luminous intensity on voltage

CBO 5 (12225)

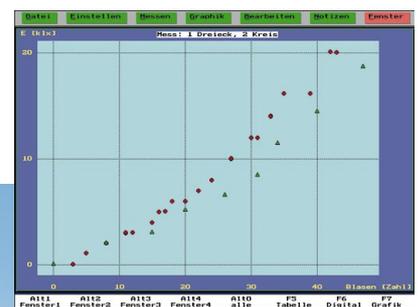

Steady state characteristics of solar batteries

CBO 6 (12226)

Photosynthesis and luminous intensity

CBO 7 (12227)

Oxygen measurement and determination of the biochemical oxygen demand (BOD)

Photosynthesis and luminous intensity (CBO 6)
